WORK EXPERIENCE

Luminous Labs

Mirpur DOHS, Dhaka, Bangladesh

Software Engineer (Project Leader)

20/03/2021 - Running

I created a Subscription product module using paypal subscription payment method for a CMS website which is a drag and drop CMS with live edit integrated system.

- From July, 2022 I started to lead Droptienda CMS team.
- I developed a live messaging system by using Socket server and Core PHP language.
- I worked on an Export/Import module where I managed more than 10,000 products
- Have experience on work liver server via FileZilla, Terminal as well
- Live debugging experience

Project

Droptienda ([link](#))

- This is a drag & drop with live edit system CMS integrated using laravel.
- Using this you can creating and managing a website, blog or online store
- You can do dropshipping business by using Droptienda
- We manage Export/Import module for products, categories and orders

E-commerce Website

- This is an Ecommerce website with full functionality of purchase , payment, shipping, delivering and developing by using Laravel
- Customer can buy products from there

SplitReq ([link](#))

- This is an social split networking system website integrated by using core PHP and JavaScript
- Using this , Any company can hire people also take for project base candidate there
- There is a messaging system which was built using the Socket live server

Smart Doctor

- This is a management software. I developed for my final year project based on Laravel
- Here anyone can call doctor/nurse for him/her patient
